

Knowledge Value Added

Achieving welfare and social health entails various aspects of which social infrastructure for knowledge progress stands atop. Knowledge signifies knowing world's facts, capability, take advantage and harmony with the world phenomena. This capability will be realized when brings human knowledge of the world as well as welfare and peace in life and attainment of prosperity. This will pave the way to produce wealth out of knowledge through changing knowledge to technology since knowledge is changed to capability as it manifests in form of innovation and technology. However, this needs to be considered that knowledge on its own plays a unique role in sustainable development and overall aspects of the countries. In addition, comprehensive and multi-disciplinary fields' knowledge based technology together with the economy and green technology can serve human beings to a great extent. Thus, saying "knowledge is power" roots from the fact that human can change phenomena under the aegis of knowledge. Taking advantage of and changing things is what often considered as technology. Knowledge finds value added as and if it empowers human. This change, sometimes called commercialization of knowledge, has to be considered as the goal for both the person and the society. Commercialization enables human to utilize knowledge as wealth and his knowledge and information in form of capital can facilitate his way towards prosperity while meeting his requirements towards excellence. In conclusion, progress model refers to issues including knowledge, economy and green technology and health of the society which need to be included within the body of policies and macro development plans of the country to guarantee a bright future of the country.
