

# Ethical Matters Concerning Science and Scientists

M. Ariannejad\*<sup>1</sup>

Ethic is the real soul of all our actions and reactions, all our behaviors, beliefs and thoughts. In this paper without any common theological philosophy and classical moral arguments, some of the most popular ethical issues concerning science, scientists and university affairs are discussed. In the end, for clarifying parts of the subject some specific instances and examples of the current formal behaviors and methods through our universities and academic societies are put forward for a challengeable discussion and enthusiastic readers are invited to reconsider these points of view.

**Keywords and phrases: Ethic, Science, Scientist, Moral Issues, University.**
