

## Google Glass

V. Sheikh-Hasani\* <sup>1</sup>

Some events have been watched in the science-fiction movies since many years ago, in most of cases, have seemed to be unrealistic to happen in our daily life, out of the magic box. After several years of rapid growth in technologies, most of those scenes and dreams are coming true. New made tools and instruments are entering in being a major part of our daily life. Suppose you are watching around and at the same time you can read your e-mails and reply them, take some photographs or record videos, doing them all completely hands free. Being abroad, as a tourist, you could simply eliminate your needs without knowing the foreign language. Currently, all of these wonderful technologies are available using Google glass.

**Keywords: Google Glass, Wearable Computers, Hands Free Technologies, Small Optical Projectors.**
