Abstract

A direct relationship between university and industry with regard to application of research results is an important issue in Iran's research and development policies. One of the routes of global research development is to introduce, establish and grow the private research centers. These establishments can organize the research in universities in way of being at the service of industries. Such attempts can also improve the growth of national services and reduces the elites' migration.

This paper introduces top agencies in research and development in different countries to offer best practice models to scientific authorities of IR. Iran.

Keywords: R&D Centers, Industry-University Linkage, Technology Production, Commercialization of Research, Technology Sales.
