

## Outlook on the History of Research Laboratories Networks in Iran

---

Mohammad Sadegh Oliaei<sup>\*,1</sup>

This article examines the history of establishing the research laboratories networks (RLN) and the consequences of their formation on higher education centers in Iran. The results of this study show we need more stable management for supporting the establishment of RLN. The laboratory networks that are currently active in the country are also generally service-oriented, and the established national laboratories are more active in this direction. The output of so-called national laboratories in the country should be improved relative to other countries. Due to the expansion of higher education centers and the increasing number of researchers, the presence active RLN is one of the main priorities and one of the important necessities of the country.

**Keywords:** Laboratory network, National laboratory, Research laboratories network
